

## Errata list

Thesis: **A Forage-Only Diet and Reduced High-Intensity Training Distance in Standardbred Horses, Growth, Health, and Performance** by Sara Ringmark

Page, line	Should read
12, Table 1, 2	Oil 31.3 <b>1000</b> 0 0 0
46, 12	<del>The glycogen content was positively correlated with BCS (<math>r=0.34</math>, <math>P=0.03</math>), BCS ribs (<math>r= 0.37</math>, <math>P=0.01</math>) and intake of fructans/100 kg BW (<math>r=0.31</math>, <math>P=0.04</math>) but no correlations were found with subcutaneous fat, muscle thickness or intake of any other nutrient component. No correlations were found between glycogen content and any nutrient component but fructan intake/100 kg BW (<math>r=0.31</math>, <math>P=0.04</math>).</del>
46, table 6	Muscle glycogen content, <b>mmol/kg DW</b>
56, 8	<del>which was confirmed by the negative correlation between BCS and muscle glycogen in this thesis;</del>
