This study evaluates whether ecotourism principles are being achieved in their ecological and social dimensions in two cases studied in Nicaragua. Minimization of ecological impacts and conservation of biodiversity are in some way achievable goals with appropriate technical support for tourist management. On the other hand, there is a trade-off between local participation and the ability to succeed as a business, because the local stakeholders do not usually have the economic and political power required to develop this enterprise.

Matilde Somarriba-Chang received her MSc. from the Rangeland Ecology and Management Department at Texas A&M University, USA and her B.Sc. from Universidad Nacional Agraria, Nicaragua. Her PhD studies have been carried out at the Department of Urban and Rural Development, SLU, Sweden.
