

# Errata for Effects of feeding regimes on phenotype and performance in Atlantic salmon

by Lo Persson

ISBN (print version) 978-91-7760-090-9

ISBN (electronic version) 978-91-7760-091-6

Acta Universitatis agriculturae Sueciae 2017:100

Umeå, 2017

## Synthesis:

p. 13                      Reference to Kallio-Nyberg et al. 2009, the positive effect of smolt size on survival has not disappeared but decreased after the year 2000.

## Paper III:

p. 1                      Same as above.

## Paper IV:

p. 2                      Same as above.

## Synthesis:

p. 28                      Figure 5a and b.  
Experiments in the research laboratory were carried out in 2011 and 2012, hence the symbols should have been triangles instead of circles and squares instead of triangles. The interpretation doesn't change.

## Paper I:

p. 647                      Biomar unrestricted feed ration should have been 2 % instead of 1.5 %.

Paper I:  
p. 650 Table III, there was no significant effect of shelter on TGC,  $p = 0.102$ .

Paper II:  
p. 3 The FA formula: the correction factor (R) should be applied to the whole formula i.e. not placed inside the parenthesis. The correction factor for the control fish was 1.3 and not 1.0.

Paper II:  
p. 5 The total number of fish per experimental round was 160; 80 per experimental stream.

Paper II:  
p. 12 and 15 The text “on – off process” should be removed.

Paper III:  
p. 7  $R^2$  should be  $R^2$ .

Paper III:  
p. 10 In the table 5 header it should be “(y: 2011, 2012, and 2013)”.

Paper IV:  
p. 1 Last sentence in the abstract should be ...”be used to likely increase return rates...”.
